

Features

- The system adopts classic MSP430F5438A from MSP430 family, very suitable for beginners to learn the control of TI MSP430 microcontrollers.
- Using DIP switch to control the power of each I/O sets, further reduce mass I/O connecting wires.
- Measurable system clocks, such as SMCLK, MCLK, ACLK.
- An acrylic cover is placed on the top of MCU area to protect the MCU being damaged from shorting pins or external force.
- Reserve three sets of expansion sockets to connect to external circuits or modules.
